

Meeting your transport needs

We always aim to integrate with our clients' needs, location and schedules. Our Hire Manager has more than 40 years' experience in the industry and will work with you to ensure our service matches your exact requirements.

As part of this approach, we offer a variety of transport options available to deliver or complement our excavator fleet. We are members of the Road Haulage Association and transport all loads under the RHA condition of carriage 1998.

Tipper Lorries are available to hire on an hourly basis, per load away or materials to site per tonne, or per load. We have Low-Loaders to transport our equipment safely and efficiently to your site or to hire per hour for your own use. Our Hiab Lorries will transport small plant to your site or are available to hire at hourly rates.

At your service

Our fleet is rigorously maintained, and is delivered safe and ready to work. But if there's a problem, we are committed to resolving it speedily. We have our own team of qualified fitters with modern, fully equipped vehicles. Alongside our fitters, we also use a network of hose or tyre repair companies. What this means to you is the reassurance that we'll keep your work on track and to budget.

Higher standards

When you need to hire plant, there are plenty of companies to choose from. But at CR Reynolds we offer a different approach to plant hire. It's an approach that puts us ahead in terms of equipment and service - and which offers major benefits to those hiring from us. The reliability of our plant and service has fuelled our success, and we are now one of the largest plant hire companies in Yorkshire. We provide top quality plant at competitive rates, supported by an efficient back-up and administration team. We are members of the industry-relevant bodies and have been awarded Investors in People and ISO9001. This serves not only as a reassurance of quality, but confirms that we have demonstrated the necessary high standards of working practices. In addition, membership gives us access to the latest information, training, representation and business support so that we continually improve on the high standards that we, and our industry, demand. A further demonstration of our standing is that we are one of only four companies to supply the Environment Agency, as part of a national framework contract.

An impressive fleet

All plant is hired out under CPA model conditions and we provide an extensive choice from an impressive fleet, either on a hire or contract basis, short term or long term. We offer the choice of self-drive or with a qualified, CPC card-carrying operator. Many of our operators have certification to work in power stations, railways or other specialist environments.

Our excavator fleet offers models from 4T to 45T, with tracked or wheeled machines, together with specialist equipment such as zero tail swing and long reach machines. All come with quick hitch, a range of buckets and check valves where appropriate. We can supply a range of attachments including hydraulic breakers, grapples, concrete pulverisers, plate-compactors and recycling buckets.

We are highly conscious that the nature of our business has an effect on the environment and we are totally committed to reducing this effect by whatever means necessary.

Our purchasing policy ensures we work with suppliers who can provide plant with the latest developments in technology to reduce fuel consumption and emissions. All our latest purchases feature the current stage 111 non-road diesel engines complying with the most up to date EU emissions guidelines. Where there is a risk of land or water pollution, plant can be provided with biodegradable hydraulic oil.

We work closely with our customers so that our service integrates with their environmental policy. Our own in house environmental management system has been awarded the prestigious ISO14001 accreditation.
